

Cinevo & Neural Project Summary

Project Origins & Development

The project originally began in early 2024 as a small horror game on Scratch called "Soggy Doggy." At the time, the project was heavily inspired by games like Poppy Playtime and relied on very simple 2D assets and beginner-level scripting. Development slowed because of bugs, lost progress, and the difficulty of maintaining a larger project alone. Over time, the focus shifted from Scratch toward more ambitious ideas involving Roblox Studio, cinematic storytelling, and eventually original animation. This led to the creation of the "Cinevo" brand, which became the main identity for future creative projects involving animation, horror, sci-fi, mystery, and experimental storytelling.

During later conversations, development shifted away from game creation and into building a fully interactive streaming-style website inspired by Netflix. The website evolved significantly over multiple iterations. Initially, it was designed as a GTA-style HTML game prototype before being completely reworked into a dark cinematic streaming platform matching the visual identity of the Cinevo YouTube channel. The site eventually included:

- Multi-page HTML structure (Home, Shows, Movies, Contact)
 - Animated glowing cursor effects with blue/purple lighting
 - Intro video background support
 - Custom Cinevo branding and logos
 - Interactive buttons and navigation systems
 - A Gmail contact button linked directly to officialcinevo@gmail.com
 - Dark cinematic UI inspired by streaming platforms
 - Placeholder sections for future uploads and projects
-

The “Neural” Animated Series

Another major focus of the conversations involved a mature-rated 2D animated sci-fi series called “Neural.” The first completed episode was titled *Industry Revealed*. The series was described as a cinematic dystopian project involving AI, corporate corruption, creatures, violence, mystery, and psychological tension. The tone combines dark sci-fi themes with cinematic horror aesthetics and emotional storytelling. Key story elements mentioned included:

- Cold-open murder scene
- Corporate dystopian setting
- Mystery files and conspiracies
- Creature reveal sequences
- Heavy tension and cinematic pacing
- Experimental sound design and atmosphere

Discussion around the release strategy focused heavily on YouTube as the main platform for publishing the series. Recommendations included structuring Episode 1 like a strong pilot episode, using cold opens to hook viewers quickly, and improving discoverability through stronger titles and thumbnails. The suggested title format for the episode became:

Neural | Episode 1: Industry Revealed

Additional advice included using YouTube Shorts to promote clips from the series, focusing on sound design to make the animation feel more cinematic, and using glitchy red/black futuristic aesthetics for thumbnails and branding. It was also suggested that the “Neural” aesthetic could strongly influence future Cinevo branding and website design, blending dystopian sci-fi visuals with cinematic streaming platform design. The overall conclusion of the conversations was that Cinevo and Neural together have the foundation for a legitimate indie animated universe with strong long-term creative potential.
